How to Use the Braille Alphabet:

The braille alphabet consists of six dots which are numbered vertically.

The capital letter indicator, dot 6, placed before a letter makes a capital letter.

The numeric indicator, dots 3-4-5-6, placed before the characters “a” through “j” makes the numbers 1 through 0.
National Braille Press supports a lifetime of opportunity for blind children through braille literacy and provides access to information that empowers blind people to actively engage in work, family, and community affairs.
